

UFX – Decentralized UFO Investigation Network

Whitepaper v1.0

Exploring the Unknown, Together on the
Blockchain

UFX

1. Introduction

For decades, people across the world have reported sightings of unidentified flying objects (UFOs). These reports are fragmented, scattered across forums, organizations, and government archives. Many are unverifiable, altered, or hidden. There is no transparent, global, blockchain-backed system to collect, preserve, and analyze UFO data. UFX aims to solve this by building the first decentralized UFO investigation network, powered by the Solana blockchain and community-driven validation.

2. The Problem

- UFO sightings are often lost in silos: government archives, small research groups, or online forums.
- Data authenticity is questionable — many reports can be manipulated or erased.
- Enthusiasts, researchers, and the public lack a trusted, unified platform.

3. The UFX Solution

- Decentralized reporting: Anyone can submit UFO sightings (photos, videos, descriptions).
- Blockchain proof: Each report or analysis is hashed and stored on Solana for transparency and immutability.
- Community validation: UFX token holders can vote on the credibility of reports.
- AI-powered analysis (future phase): Automated tools to analyze images and videos.
- Open-access archive: A transparent and growing UFO database accessible to everyone.

4. Tokenomics

- Token name: UFX
- Ticker: \$UFX
- Total supply: 1,000,000,000 (1B)

Launch model (Pump.fun):

- 100% of the supply is launched fairly on the Pump.fun bonding curve.
- The creator and team do not receive any pre-minted tokens.
- Anyone — including the developer — must acquire tokens through the bonding curve like all participants.

Post-launch allocation (targets):

- Community – majority supply in circulation.
- Treasury – built later via buybacks, trading fees, donations.
- Team – tokens may be accumulated transparently.
- Marketing & Partnerships – funded via treasury and support.

5. Roadmap

Phase 1 – Launch: Website, Pump.fun token, Twitter.

Phase 2 – Community Building: UFO news, memes, partnerships.

Phase 3 – Database Implementation: Public domain archives, submission form.

Phase 4 – AI Integration: Automated analysis, paid API & subscription.

6. Why Buy \$UFX?

- Speculative upside: Early entry via Pump.fun bonding curve.
- Utility: Access to reports, AI tools, and voting rights.
- Transparency: Clear roadmap – if bonding succeeds, we build; if not, project stops.
- Fair launch: No hidden insiders, all steps are public.

7. Disclaimer

UFX is a community-driven project. This whitepaper does not constitute financial advice. Cryptocurrencies are volatile and carry risks. The success of UFX depends on community adoption and execution of the roadmap.
